DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-40 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 1. Claim 1-4, 6, 9-12, 14, 17-21, 23, 26, 33-35, 37, 39, and 40 are rejected under 35 U.S.C. 102(e) as being anticipated by Brown et al., U.S. Patent Application Publication No. 2002/0141544.

Regarding claim 1, Brown discloses a method (fig.3) for an operating system (executed by controller 60, fig.1, [0021]) to operate a system component, the operating system configurable to drive a plurality of system components ([0015]), the method comprising: identifying a component (e.g., upstream transmitter formed of 35, 85, 87 of fig.1; [0017]); obtaining parameter information comprising power characteristics of the component from nonvolatile memory (fig.3, item 205, [0022]; nonvolatile memory, [0016]); and characterizing the component using the parameter information (fig.3, items 215, 216; [0023]), wherein the characterization allows the operating system

to operate the component ([0027]) and report power characteristics to an upstream device (fig.3, item 225; [0022], [0019]).

As to claim 2, Brown discloses the method of claim 1, wherein the operating system is a cable modem operating system (e.g., [0014]).

As to claim 3, Brown discloses the method of claim 2, wherein that the component is a tuner (i.e., upstream transmitter formed of 35, 85, 87 of fig.1; [0015], [0017]).

As to claim 4, Brown discloses the method of claim 3, wherein operating the component comprises varying RF transmission power ([0017]).

As to claim 6, Brown discloses the method of claim 3, wherein parameter information comprises band crossover frequency information ([0016]).

As to claim 9, Brown discloses the method of claim 3, wherein parameter information comprises component address information (setting control registers of components, [0015], [0016]).

Regarding claims 10-12, 14, and 17, Brown discloses a system (fig.1) comprising means for performing the corresponding method steps discussed above with respect to claims 1-4, 6, and 9.

Regarding claims 18-21, 23, and 26, Brown further discloses computer code ([0021]) for performing the corresponding method steps discussed above with respect to claims 1-4, 6, and 9.

Regarding claim 33, Brown discloses a cable modem comprising a tuner and nonvolatile memory as discussed above with respect to the method steps of claims 1-3.

As to claim 34, Brown discloses the apparatus of claim 33, wherein the nonvolatile memory is flash memory ([0016]).

As to claim 35, Brown discloses the apparatus of claim 34, wherein the tuner is a cable modem RF tuner ([0016]).

As to claims 37, 39, and 40, see the rejections of claims 4, 6, and 9, above.

Application/Control Number: 09/965,525

Art Unit: 2623

Page 4

2. Claims 27-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Stetson et al., U.S. Patent No. 6,552,614.

Regarding claims 27 and 30, Stetson discloses a cable modem (fig.2, 100) (and corresponding method) comprising: a tuner (fig.2, items 112, 122, 114, 116); a non-volatile memory (fig.2, item 128) operable to provide power characteristics associated with the tuner to a cable modem operating system (col. 3, ll. 54-59, col. 1, ll. 31-35), wherein the cable modem operating system uses (accounts for) the power characteristics to drive the tuner to transmit at a desired power level (col. 6, ll. 7-26).

As to claims 28 and 31, Stetson discloses the cable modem and corresponding method of claims 27 and 30, wherein the nonvolatile memory is flash memory (col. 6, ll. 15-20).

As to claims 29 and 32, Stetson discloses the cable modem and corresponding method of claims 28 and 31, wherein the tuner is a cable modem RF tuner (col. 4, ll. 5-20).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 5, 7, 8, 36, and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown in view of Lapid, U.S. Patent No. 6,687,489.

Regarding claims 5, 7, 8, 36, and 38, Brown discloses the methods and apparatus of claims 3, 11, 20, and 35, but fails to disclose parameter information comprising IF output information, IF

AGC Gain Threshold information, or RF AGC Gain Threshold information. However, in an analogous art, Lapid discloses such parameters (e.g., IF/RF TOP and AGC response parameters) may be used for temperature compensation in a cable modern tuner (col. 4, ll. 1-51). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the parameter information of Brown to include the IF/RF TOP and AGC response parameters taught by Lapid, thereby enabling improved the cable modern tuner performance.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher M. Lambrecht whose telephone number is (571) 272-7297. The examiner can normally be reached on Mon-Fri, 9:30 AM to 6:00 PM.

Application/Control Number: 09/965,525
